

Capstone Project

Week One Workshop Activities

1. Form your team

You can have a minimum team size of 3 members or maximum team size of five members.

2. Discuss your project

If team members have multiple project ideas, you need to discuss and also consult with your tutor to finalise a project which is feasible within the time and resources, as well as that meets the requirements of a capstone project.

3. Outline the scope of the project considering the user/client requirements, implementing those requirements as usable functionalities of the application, data required, data sources, any privacy issues, and the appropriate use of materials learnt from the advanced level units.

4. Create a diagram showing the main use cases of the system which will be used by the clients.

5. Convert the use cases into subsystems, identify external entities and create a context diagram of the system

6. Discuss with team members and allocate the task of developing each of the subsystems or facilitating each of the use cases.

7. Discuss meeting times and create a weekly meeting schedule for your team meetings

8. Decide the team leader role and duration considering the number of team members as every team member has to take the role of team leader.

9. Decide the tasks to be completed by next meeting

10. Create a action plan and include the tasks.

Find out future jobs you will be interested to apply. Use the given SFIA skills mapping to build a skills development plan to be proficient in various skills.
